

Reconsider Your Manual Work Order System

Work orders for day-to-day maintenance and other tasks can quickly overwhelm a manual scheduling and tracking system. Work order management software allows for quicker, easier tracking and assigning of work orders and helps cut down on administration and off-the-book work costs.

Simple and Accessible

Easily create and assign work orders. Automatically route them to field staff which can then be accessed on mobile devices.

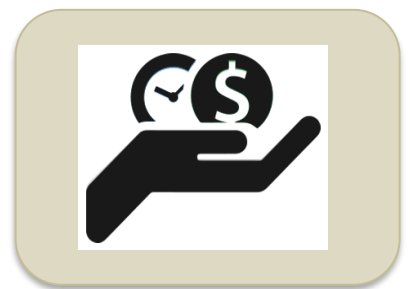

Easy Tracking

Get notified in real time when work orders are created or completed and get started on invoicing right away.

No Lost Requests

Reduce misplaced, misfiled, or illegible work orders. Work orders can also be created on mobile devices and sent to the database.

Save Time and Money

Work orders are sent automatically to field staff and can be accessed on any mobile device, no more trips back to the office.

Time spent on mishandled paperwork lessens a company's ability to provide excellent customer service, increase sales, and improve the bottom line.

150 Hours/Year

Time executives waste looking for lost information! (That's almost a whole month!)

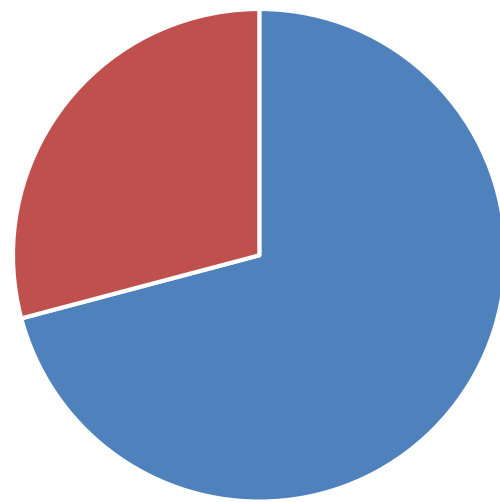

\$120

Spent, on average, looking for a missing document

Employees spend about **30%** of their time looking for information they need to perform their jobs.

■ Time Working ■ Time Searching

Save time and money with work order management software

Using the correct organizational tools can improve time management by

40%

50 hours

Given up a month to off-the-book work if 10 techs spend 15 minutes/day on non-recorded work.

Accelerator CC is a simple, enterprise cloud-based facilities management software that helps you manage all aspects of your business.
